45 MINUTES TO 45 SECONDS

Hydraulic Quick Coupler

Design Patent (Applied for No :- 815/MUM/2010)

With the Earthmoving Industry growing fast in India, it has become necessary to upgrade the Machines to achieve versatility and to complete project in stipulated time frame. Gone are the days when Excavator was used only for digging with a bucket. It is very common nowadays that one Excavator has two or more attachments like Bucket, Rock-Breaker, Combi-Cutter, Shear, Rotary Drum Cutter, Clam Shell Bucket etc.

NCM Quick Couplers are designed to facilitate changeover of attachments on Excavators. The Coupler is actuated hydraulically with a cylinder and it is possible to detach an existing attachment and couple another by the Operator seated in the cabin.

HardOx® Steel
used in high wear areas
for strength and durability
